

IWS Series

Drawing on years of experience in the height adjustable furniture market, JORO is proud to present our new IWS Series of industrial assembly work station.

Using the same exacting requirements of all Joroman™ products, our IWS Series combines elegance and modularity with precision and function.

Joroman™ work stations can be configured for multiple height ranges and various flexible layouts based on the application requirements.

IWS Series work stations ship with task lighting and an industrial duty power bar as standard accessories. Cable management forms an integral part of the design of the structure and allows for easy routing of wiring from raised floors or drop down power feed. Critical components are shared between adjacent work stations, to enhance the performance and maximize the client's investment.

IWS Series work stations feature surfaces with rounded corners and radiused edging and mechanisms with electric or manual crank adjustment.

IWS Series work stations can be configured for multiple height ranges and various configuration layouts based on the application requirements.

Our standard crank height adjustment range is 14" (25" to 39"). Electric motors can be retrofit at any time, with minimal disruption to the setup. Joroman™ products are also offered with a 26.5" adjustment (25.5" to 52") for a true sit to stand range.

Layouts can vary from simple rectangular stations to more complex quad configurations. Corner stations can also be added when "L" or "U" shaped grids are required.

All of our IWS Series work stations are designed with future expansion in mind. Our goal is to provide you with the best work station for your needs of today, that will grow to meet your needs of tomorrow.
